

# ALL ABOUT TRIANGLES

**Clue 1:** How many letters are in the word 'Dragon'?

A triangle is a shape that has three sides and three angles, the three angles always add up to  $180^\circ$ . There are three different types of triangles, Equilateral, Isosceles and Scalene, you can tell what type of triangle it is by how many equal sides and angles it has. An Equilateral triangle has three equal length side and three equal angles, all  $60^\circ$ . An Isosceles triangle has two equal length sides and two equal angles. A Scalene Triangle has no equal sides or angles.

Equilateral Triangle

Isosceles Triangle

Scalene Triangle

Acute Angle

Right Angle

Obtuse Angle

Triangles can also be identified by the types of angles they have. All three corners of an Acute triangle are less than  $90^\circ$  each. A Right angle triangle has one corner that is exactly  $90^\circ$ , the other two corners will add up to  $90^\circ$ . An Obtuse has one angle that is more than  $90^\circ$ .

## MATHS PYRAMIDS

Each triangle is made by adding the two numbers below. Fill in the missing numbers.

## SHAPE-DOKU

Fill in the missing shapes, each shape can only appear once in each row, column and box.
